ChatGPT said:

Imagine you are searching for your friend in a classroom.

- **Big O (O):** Your friend is the **last** student. 😫
- **Big Omega (Ω):** Your friend is the **first** student. 😊
- **Big Theta (Θ):** You search all students, one by one. 🔍

Remember this simple trick

Symbol	Easy meaning
O	Maximum growth
Ω	Minimum growth
Θ	Exact growth rate

In one line:

- **O** = Upper limit
- **Ω** = Lower limit
- **Θ** = Both limits together

These describe how an algorithm's work grows as the input gets bigger.

If you want, I can:

- ↪ Explain Big O, Omega, and Theta with practical code examples
- ↪ Compare Big O, Omega, Theta with real-life analogies
- ↪ Describe how to determine Big O, Omega, and Theta for a new algorithm
